

Ten Points in Glass to get you Going with the One Choice in EFIS for your RV-10.

Real-Time 3D Synthetic Vision

See what's in front of you even when you can't!

HITS and Integrated TAWS

Virtual "skyway" keeps you precisely on course, and the integrated Terrain Awareness Warning System alerts you of potential terrain hazards, no matter what the conditions...fog, rain, darkness or overcast.

Horizontal Projected Path Marker

A "noodle" extends from the nose of the aircraft symbol, showing the turning ground track 1 minute into the future.

Aircraft Harness for RV-10

Test your wiring, install your harness and components, and give it power!

Industry-leading Software

Based on the same version loaded in the FAA Certified Chelton FlightLogic Synthetic Vision EFIS, only Chelton can provide the peace-of-mind of software independently tested for certification.

Built-In FMS and GPS

Complete Flight Management System uses Jeppesen and other databases for departure, enroute, arrival and approach procedures. An non-certified 12-Channel GPS is included, with the option to upgrade to the FreeFlight 1101 WAAS GPS with integrity monitoring.

Voice Warning System

Three escalation levels (advisory, caution and warning) for 48 conditions requiring pilot attention.

VNAV

Interface directly to your Trutrak Autopilot for hands-off Lateral & Vertical guidance.

System Integration

Flight instruments, GPS, Flight Management System, Moving Map, terrain display, weather & traffic display, fuel totalizer, master voice warning, timers, and more...all in one unified system. Plus connect your SV-10 to nav/com radios, a traffic system, a datalink weather system, and more.

Dead-Stick Glide Ring

A blue ring around the aircraft symbol—corrected for turns, wind, terrain, airspeed, altitude and rate of descent.

**Get going with the best in EFIS. Made flawless and now made for your RV-10.
